

Effectively Protect Your Space With MicrobeCare

Keep your employees & office safe from viruses and infections. It's easy.

MicrobeCare is a unique, patented, EPA and FDA approved antimicrobial solution that protects against 99.99% of viruses, infections and mold in healthcare, education and office environments.

Protection is warranted for 5 years through an easy and straightforward **ONE TIME application** process.

Use MicrobeCare to Make Your Space Safe

How is MicrobeCare applied?

MicrobeCare can be integrated into or applied to virtually any material or surface through an electrostatic spray technology. It's odorless, colorless, non-transferable, continuously active and environmentally safe. It can be completed within one day.

How does it protect your surfaces for years?

When microbes come into contact with a surface protected with MicrobeCare, cell walls are destroyed. This disrupts the growth process, and the cells are unable to reproduce.

High Alpha - The Safest Office in Indy

High Alpha recently treated their office with MicrobeCare to ensure employees are protected and their spaces are decontaminated, for years to come.

High Alpha

"At High Alpha the health and safety of our team is paramount. Since the rise of COVID-19 we have implemented a number of measures designed to mitigate the risk of infection to our staff. Of those investments, MicrobeCare stands alone in its ability to provide long-term protection. We're thrilled with our investment and believe it will go a long way toward helping us create the safest environment for our team, family and friends."
